

C. Condensed Component Graph

Time Constraints

- **java** : 3.0 Seconds

Memory Constraints

- **java** : 256MB

Given a directed graph, generate its *condensed component graph*, where each strongly connected component (SCC) is a node, and edges exist between components if there is at least one edge from a node in one SCC to a node in another.

Input Format

- First line: N (vertices), M (edges)
- Next M lines: pairs (u, v) (directed edge from (u) to (v))

Output Format

- First line: K (number of components)
- Next lines: directed edges in the condensed graph using component numbers

Sample Input

```
8 10
0 1
1 2
2 0
2 3
3 4
3 7
4 5
5 6
6 4
7 3
```

Sample Output

```
3
0 1
1 2
```
